

Djigzo for BlackBerry Now Automatically Encrypts All Email Sent to and from a BlackBerry Smartphone with S/MIME

Djigzo, a provider of open source email encryption products, today announced that support for the BlackBerry smartphone has been added to the company's email encryption gateway. Djigzo for BlackBerry can be used to send and receive S/MIME digitally signed and encrypted email from a BlackBerry smartphone. With Djigzo, all email in transit and at rest is protected against unauthorized access.

Amsterdam, NL ([PRWEB](#)) April 27, 2010 -- [Djigzo](#), a provider of open source email encryption products, today announced that support for the BlackBerry smartphone has been added to the company's [email encryption](#) gateway. [Djigzo for BlackBerry](#) can be used to send and receive S/MIME digitally signed and encrypted email from a BlackBerry smartphone. Djigzo for BlackBerry is an add-on to the built-in BlackBerry mail application. The most difficult part of email encryption is key management. This is especially hard on mobile devices. Djigzo for BlackBerry therefore relies on the Djigzo gateway for most certificate management functions. Because all email is automatically encrypted with S/MIME, all email in transit and at rest is protected against unauthorized access.

Features:

- * S/MIME encryption and digital signing using X.509 certificates.
- * All email is protected with an encrypted S/MIME tunnel.
- * Compatible with BIS.
- * Compatible with existing S/MIME clients (like Outlook and Lotus Notes).
- * Message body and attachments are encrypted. HTML email supported.
- * Uses BlackBerry encryption functionality (3DES, AES, X.509, S/MIME).
- * Compatible with the BlackBerry smart card reader.
- * Messages are stored on the BlackBerry smartphone in encrypted form.

About Djigzo:

[Djigzo](#), based in Amsterdam, NL, offers open source products that allow companies to automatically secure email and protect against unauthorized access of email both in transit and at rest. Djigzo Email Encryption Gateway is a centrally managed email server (MTA) based on open source standards that encrypts and decrypts your incoming and outgoing email at the gateway level. Djigzo supports two encryption standards: S/MIME and PDF encryption. Because Djigzo Email Encryption Gateway functions as a general SMTP email server, it is compatible with existing email infrastructures like Microsoft Exchange and Lotus Notes. Djigzo can be installed using one of the provided packages for Ubuntu Linux, Debian, Red Hat and CentOS. A ready to run "Virtual Appliance" for VMware ESX and Workstation is available.
